Life cycle of a clinical trial

**Stage 1: Planning**
Understand the research question and the amount and type of data you need to collect.

**Stage 2: Conduct**
Collect accurate data to answer your research question while keeping your participants and their data safe.

**Stage 3: Analysis**
Analyse the data set objectively so the results can be published for peer review.

**Stage 4: Share Results**
Share the results of your research through publication, conferences and posting to the trial registration record.
