

PROGRESS AND KEY ACHIEVEMENTS 2017-2020

Changing the way we tackle cancer in Victoria

In 2017, the ten members of the VCCC devised and agreed to a plan that sought to dramatically change the way we tackle cancer in Victoria, in an effort to accelerate translation of research and drive better outcomes for patients with cancer.

Supported by an investment of \$30 million from the Victorian Government, over the past three years the alliance has led collaborative efforts that, in the words of an independent External Review in October 2019, represents “exceptional headway” that has the VCCC on track to become “one of the preeminent population based cancer systems in the world”.
